

Backshells for Connectors

Novoflex Backshells are made of high quality Nylon PA66, corrosion resistant. Connector backshells are essential accessories that are threaded onto the rear of a circular or rectangular connector shell to provide additional support and protection and create a more polished aesthetic look. They help protect connections from mechanical wear, environmental conditions, and electromagnetic interference (EMI). These backshells have a positive locking system for high vibration. They have a quick lock pin feature for easy usage. They provide strain relief at the termination area of virtually any connector.

Features:-

Angle of Backshell: straight, 90°

Mounting type: Straight plug/ Box mounted

Flammability rating: UL94 V2

Operating temp:-25° to 85° C

Application:- Cable Management, Aviation, Lightning, Defence and Military, Wiring Management, Telecom, Automotive
